SNGU TYPE: GENERAL

SNGU NUMBER: 2021002

***** GENERAL MESSAGE TO ALL GALILEO USERS *****

GALILEO HIGH ACCURACY SERVICE (HAS) TEST CAMPAIGN

The Galileo High Accuracy Service is intended to be an open access and free of charge service, based on the provision of precise corrections transmitted by the Galileo E6 signal (E6-B, data component) from a subset of the Galileo satellites, allowing users to achieve improved positioning performance.

From 18/05/2021 to 30/09/2021 and from 21/03/2022 to 29/04/2022, Galileo conducted a set of testing activities looking at specific aspects of the HAS service and, consequently, modifications to the E6-B data stream (without any impact on compliance with the published OS SIS ICD) may have been observed by users equipped with a receiver that is capable of acquiring this signal and extracting its data content. These testing activities, already finalized, have fulfilled their objectives in support of the HAS development activities in view of an initial operational service declaration planned before the end of 2022.

Additional information on the HAS service and its implementation roadmap is provided in the [Galileo High Accuracy Service \(HAS\) Info Note](#). Updates regarding further HAS Phase 0 testing activities will be communicated as needed.
